Managing the cost of your cloud can be a challenge...

Cloud overspending and lack of cost control have been identified as one of the **top 3 issues** across various organisations.

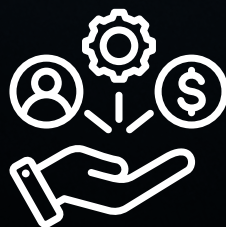

Low visibility of cloud costs

Limited availability or use of dashboards, key insights or ability to see detailed costs per resource.

High-level of pricing complexity

There is limited grasp of current cloud spending, given complexities between SKUs, region and instance generation.

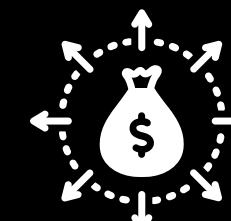

Idle and wasted resources

There is limited or no control of computing resources, with lack of adequate monitoring to prevent cloud sprawl.

No established cloud architecture

Cloud deployments often not sized correctly, with limited consideration for application characteristics.

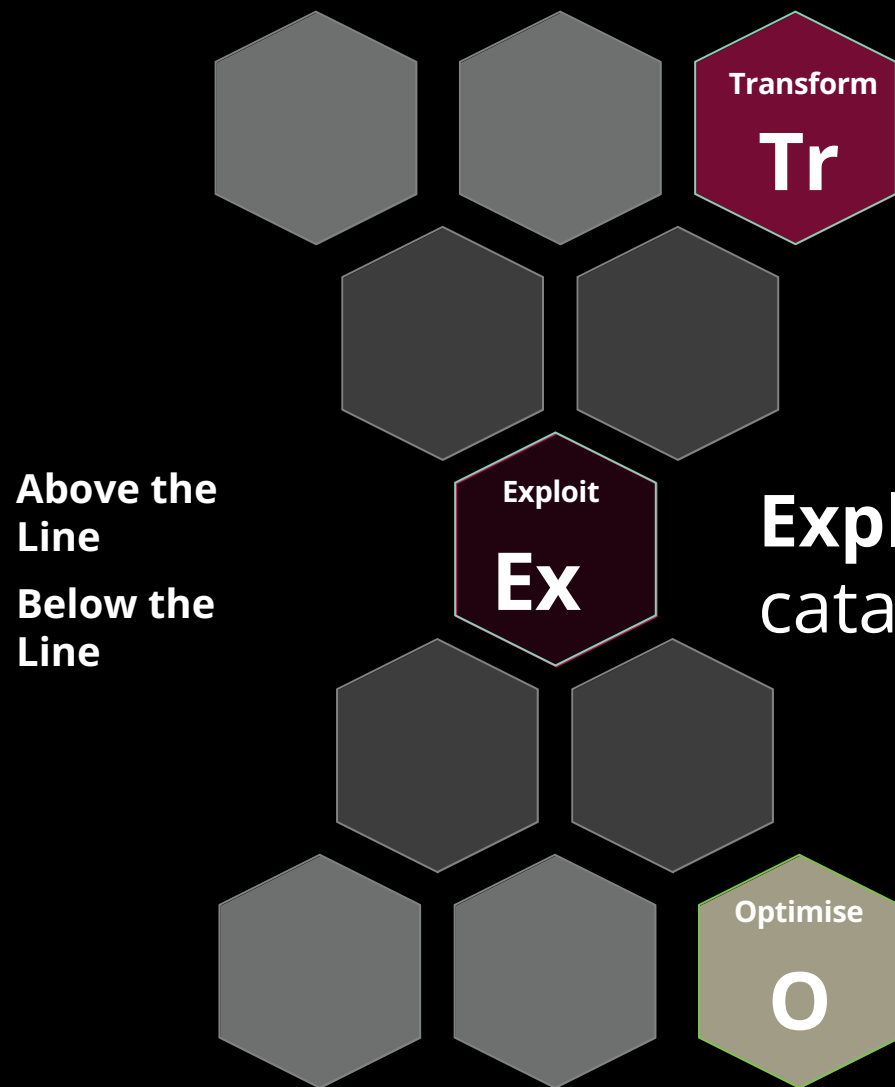

Lack of cloud spending oversight

Difficulty in monitoring cost on multiple cloud platforms with limited traceability to individual cost centres.

Cloud Cost Transformation

Create value by transforming your costs with Cloud.

Transform. with Cloud.

Exploit. Cloud as a catalyst.

Optimise. your Cloud spend.

	Secure your future through innovation at scale with Devopstrio's business-led Cloud Transformation approach.	<ul style="list-style-type: none">• Transform business and public services with Cloud• Improve customer, employee and citizen experiences• Reduce business operating costs enabled by Cloud
	Exploit cutting edge Cloud technology and good practices with Devopstrio's depth of know-how in DevSecOps with industrialised frameworks and technology.	<ul style="list-style-type: none">• Create value with a reduction in the cost of change• Improve the quality of your services and applications• Remove the burden and cost of your technical debt
	Optimise Cloud spend to realise savings with Devopstrio's proven expertise, value-focused methodology and suite of differentiated technologies.	<ul style="list-style-type: none">• Deliver value with In-year reduction in operating costs• Devopstrio's proven levers to optimise Cloud spend• Create space to invest in further exploitation of Cloud

Optimise. your Cloud spend

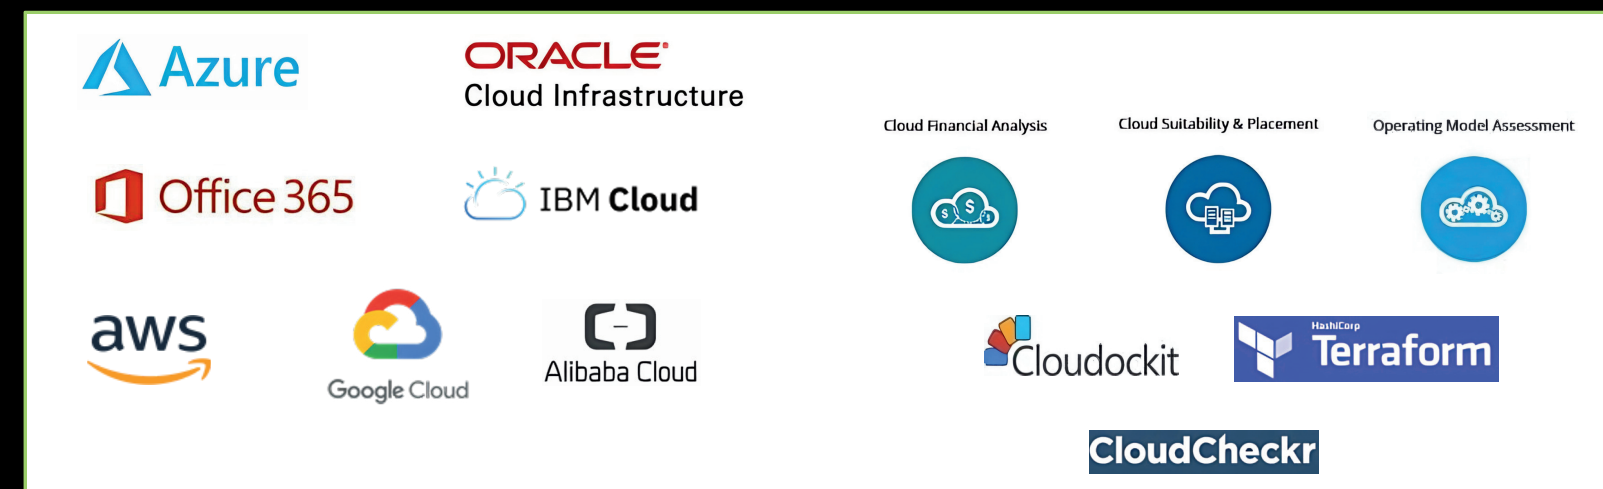

Deliver value with in-year reduction in operating costs.

Optimise Cloud spend to realise savings with Devopstrio's proven expertise, value-focused methodology and suite of differentiated technologies.

Devopstrio's business-led approach to optimising your Cloud spend establishes the building blocks for greater value creation through the exploitation and transformation of Cloud.

- **Cost Awareness** – Improve your spending awareness, create traceability and accountability across the organisation with greater forecasting and budget management.
- **Consumption Management** – Implement monitoring and managing of cloud consumption by leveraging data analytics and enabling new consumption model adoption.
- **Architecture** – Identifying actionable optimisation use cases, restructure account ownership and right-sizing cloud resources.
- **Waste Management** – Cleaning up unused cloud resources and manage the lifecycles of costly services.
- **Governance** – Establish Cloud policy to maintain realised savings and automate the implementation of optimisation recommendations.
- **Demand Tactics** - Break down "Silo" mentality by aggregating and forecasting demand to maximise savings by leveraging commitment discounts.

How Devopstrio Can Help?

Context & Background

- We have helped our clients to achieve cloud cost saving of up to 40%
- Clients are adopting a cloud first strategy but, in many cases, workloads are not optimised, this leads to a significant amount of OPEX spend being wasted
- This proposal sets out to assess that Cloud workloads are deployed and configured in a cost effective manner without compromising performance
- Using the wealth of knowledge, experience and tools gathered serving our clients we will conduct an assessment of the current Cloud workloads to ensure that they are fully optimised, cost effective and will give a clear direction for the deployment of future cloud workload deployments

Objectives

1. High level assessment of current cloud implementation and workloads
2. Use CloudCheckr to produce a net cost optimization report detailing areas where cost savings could be made
3. Identify recommended actions for making these cost savings through a deep dive of CloudCheckr report and license utilization review
4. Produce a high-level implementation plan for cost saving recommendations
5. Move into delivering these recommendations on the clients cloud estate

Outcomes

- A. Review of current cloud implementation assessing efficiency usage and cost profile
- B. Recommended cost optimisations and strategies to deliver against them
- C. High level delivery plan and timelines
- D. Outline Business Case

Outline Optimisation Case - Timeline

Startup (Pre-Engagement)

- Onboard team
- Identify Key contacts
- Audit Access granted to Cloud Solutions

Analyse (2 weeks)

- Understand current cloud spend
- Configure CloudCheckr
- Understand current cost control measures
- Execute CloudCheckr Tool
- Analysis of CloudCheckr Output
- Analysis of targeted areas gathered from output of CloudCheckr tool that require further investigation

Report (2 weeks)

- Priority based recommendations
- Potential net OPEX cost savings
- High level timescales to implement recommendations
- Executive summary creation
- Workshop to discuss findings

Global Presence & Delivery Centers

- HQ: London, United Kingdom
- Offices: New York (USA), Chennai ,Bangalore(India)
- Delivery Model: Hybrid (Onshore + Offshore)
- Support Coverage: 24x7 Global Operations
- Compliance: GDPR, HIPAA, ISO 27001
